

ES 07/03/2019

$$\Omega = \{a, k, y, m, e, u, s, z, w, j, i, g, z, b, c, l\}$$

$$P(\Omega) \ni A = \{\emptyset, \{a, k, y, m, e, u, s, z, w, j, i, g, z, b, c, l\}, \\ \{a, k, y, m, e, u, s, z, j, i, z, b, l\}, \{i\}\}$$

$$A = \{\underline{m}, \underline{j}, \underline{i}, \underline{y}, \underline{l}, \underline{e}, \underline{z}, \underline{s}, \underline{c}, \underline{u}, \underline{z}, \underline{b}\} \quad \frac{3}{12}$$

QUESITO 1:

Non è un'algebra non c'è il complementare di $\{i\}$ e dell'altro insieme. FALSE

$$\text{Quesito 2: } \frac{2^1}{12_4}$$

$$\text{Quesito 3: } \{\underline{m}, \underline{a}, \underline{t}, \underline{h}, \underline{e}, \underline{i}, \underline{c}, \underline{s}\} \quad \frac{5}{12}$$

$$\text{Quesito 4: } \{\underline{m}, \underline{a}, \underline{t}, \underline{h}, \underline{e}, \underline{i}, \underline{c}, \underline{o}\} \quad \frac{2^1}{12_6}$$

$$\text{Quesito 5: } \frac{3}{12} + \frac{5}{12} - \frac{2}{12} = \frac{6}{12} = \frac{1}{2}$$
